Summary

Computer Science Engineering (Cybersecurity) student focused on AI engineering, data-driven applications, and backend systems. Experienced in building AI-powered and full-stack applications using Python, FastAPI, React, Next.js, LangGraph, LLM APIs, PostgreSQL, and Azure. Interested in applied AI, intelligent automation, scalable systems, and solving real-world problems through technology.

Education

Lakshmi Narain College of Technology & Science, Bhopal 2024 – 2028
Bachelor of Technology in Computer Science Engineering (Cybersecurity)

Patna High School, Patna (NIOS) 2024
Senior Secondary Education

Technical Skills

Languages: Python, C++, JavaScript, TypeScript, SQL, HTML, CSS
AI & Machine Learning: LLM APIs, AI Agents, LangGraph, RAG, Prompt Engineering, Machine Learning, Data Analytics
Frontend: React, Next.js, Vite, Tailwind CSS
Backend & APIs: FastAPI, Node.js, REST APIs, JSON, API Integration
Databases & Storage: PostgreSQL, MySQL, Redis, Qdrant, Prisma, Azure Blob Storage
Geospatial & Cloud: CesiumJS, GeoJSON, GIS Data Processing, Azure
Tools: Git, GitHub, Docker, Postman, VS Code, n8n, Zapier
Core CS: DSA, OOP, Operating Systems, Computer Networks, Cybersecurity Fundamentals
Professional: Critical Thinking, Research Analysis, Problem Solving

Experience

Pinnacle Labs May 2026 – June 2026
Intern *Remote*

- Worked on backend development and problem-solving tasks involving C++, APIs, and scalable application workflows.

Security Research & Bug Hunting April 2026 – Present
HackerOne & Intigriti *Remote*

- Developing practical skills in web security, vulnerability assessment, reconnaissance, and responsible disclosure workflows.

Smart India Hackathon 2026 Sep 2026 – Present
Internal Round Qualifier *LNCT&S, Bhopal*

- Worked with Team Z-AXIS on ideation, technical planning, and solution presentation for SIH 2026.

Projects

KaushalIQ | *Python, FastAPI, React, Machine Learning, Data Analytics* | GitHub

- Developing an AI-powered labour-market intelligence platform for analysing skill demand, workforce supply, skill gaps, trends, and future demand.
- Designed a modular analytics pipeline covering data ingestion, validation, cleaning, normalization, feature engineering, analytics, and ML/forecasting workflows.
- Designed FastAPI-based intelligence APIs for analysing demand, supply, skill gaps, trends, forecasting, and AI-generated insights.

GeoVISTA | *React, TypeScript, CesiumJS, Node.js, Python, Groq API, Azure Blob Storage* | GitHub

- Developed a 3D geospatial property-intelligence prototype extending traditional 2D cadastral data with building height, elevation, floors, and vertical property representation.
- Built interactive 3D visualization workflows using CesiumJS and processed building, terrain, boundary, and elevation datasets using Python.
- Integrated a Node.js REST API, Groq-powered AI assistant, and Azure Blob Storage architecture for serving and processing geospatial datasets.

AgroZyro | *Next.js, React, TypeScript, Tailwind CSS, PostgreSQL, Prisma, Auth.js* | GitHub

- Developing a multi-commodity agricultural marketplace designed to connect farmers, buyers, sellers, traders, and agricultural businesses.
- Designed buyer, seller, product, inventory, order, payment, and market-rate workflows with support for commodity quantities in KG and Quintal.
- Designed the application architecture using Next.js, TypeScript, PostgreSQL, Prisma, and Auth.js with role-based access, validation, and secure secret-management practices.

Achievements & Profiles

LeetCode: leetcode.com/u/harsh5ingh **Codeforces**: codeforces.com/profile/harrshdev52
Open Source: Contributor at GSSoC, Hacktoberfest, and other community-driven programs
